

MULTICRAFT

The new multi-talented battery with a high cycling-resistance and a long lifetime.

- High capacity, through the use of reinforced plates
- Extra resistant to cycling
- Extra long lifetime

The **MULTICRAFT** battery of **EXIDE** has been created for the independent energy supply of:

- Special vehicles and lorries
- Lighting-installations
- Storage of solar-energy

Traditionnal batteries are not adapted for this kind of applications. To close this gap, **Exide** has developed special batteries that distinguish them from traditionnal starterbatteries through the use of:

- Reinforced battery-plates (up to 3 mm) with a more efficient use of the active material, resulting in a maximum Reserve Capacity
- Envelope-separators with glass-mat to protect the battery for short-circuits and to maintain the active material inside the grids

MULTICRAFT batteries are especially designed for the following applications:

Traction:

- Forklifts
- Tailboards
- Hydraulic ramps
- Sweepers
- Wheelchairs

Mobile Power Supply:

- Lighting
- Traffic signalisation
- Signalisation in buildings/construction
- Storage of solar-energy
